2512	7590	01/12/2009		
PERMAN & GREEN 425 POST ROAD FAIRFIELD, CT 06824			EXAMINER HOANG, HIEU T	
			ART UNIT 2452	PAPER NUMBER
			MAIL DATE 01/12/2009	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/658,568	Applicant(s) DONG, ZHU	
	Examiner HIEU T. HOANG	Art Unit 2452	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 November 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/12/2008 has been entered.
2. Claims 15-18 are new.
3. Claims 1-18 are pending.

Response to Arguments

4. Applicant's arguments have been fully considered but they are not persuasive.
5. Applicant argues that the prior art does not teach "defining a recipient." The examiner agrees that the existing prior art does not teach defining a recipient. However, given that one skilled in the art knows how to compose a message and checking for any changes in data structures including a recipient identifier as disclosed by Lewis (col. 9 lines 8-17 and col. 10 lines 55-67,) it would have been obvious for the message sender to define a recipient of the message as well.
6. Applicant argues that the message generator is not a mobile communication device. The examiner disagrees. First, being mobile or not is not the crucial part of the invention; it would have been obvious to use a mobile device instead of an immobile device such as a desktop. Second, the obviousness is clear, e.g., using a mobile laptop

Art Unit: 2452

to substitute a desktop of Lewis is obvious. Third, Ben-Shachar teaches a mobile device for managing notification (col. 5 lines 63-67)

7. Applicant argues that the prior art does not teach application call. The examiner disagrees. Application call is extremely known in the art. Furthermore, Frederiksen discloses that an application performs an application call (an invocation of another application) to editor application on a mobile device (fig. 6, [0113]). It would have been obvious to use application call to link automatically related programs and therefore create ease of use for the user.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 1-4, 6 and 15-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ben-Shachar et al. (US 6,208,996, hereafter Ben-Shachar), in view of Lewis et al. (US 6,738,635, hereafter Lewis), in view of Frederiksen (US 2002/0080186) and what was known in the art (Official Notice or ON)

Art Unit: 2452

10. For claim 1, Ben-Shachar discloses a system comprising:

- a transmitting mobile communication device connected to a communication network (fig. 1, mobile device 3 in communication with desktop computers 4 and 13, and mobile device 10), and said transmitting mobile communication device comprising an event scheduling element (abstract, col. 6 lines 52-61, a calendar application that allows the user to enter an appointment and an associated user notification)

Ben-Shachar does not explicitly disclose a message generator enabling an operator to generate a message associated with a scheduled event and a predetermined time for transmitting said message to the at least one recipient, and a timing element configured to record the predetermined time in a timing register, the event scheduling element being further configured to cause transmission of said message to the at least one recipient at said predetermined time.

However, Lewis discloses:

- a message generator enabling an operator to generate a message associated with a scheduled event and a predetermined time for transmitting said message to at least one recipient (col. 9 lines 9-17, schedule data alert messages associated with an event can be edited by a user, col. 10 lines 57-63, recipient is identified by a message retrieving entity identifier, col. 10 lines 33-43, fig. 6, any data including the message receiving entity is checked for change, col. 11 l. 8-25, user selectable time for delivery of notification message);

Art Unit: 2452

- a timing element configured to record the predetermined time in a timing register (col. 11 l. 8-25, storing the user defined time in memory), the event scheduling element being further configured to cause transmission of said message to the at least one recipient at said predetermined time (col. 8 lines 35-39, send notification at a time in advance of schedule event)

It would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Ben-Shachar/Lewis to allow the user to edit or modify alert messages to provide a scheduling program with more usage to the user.

Ben-Shachar/Lewis does not disclose that the event scheduling element configured to perform an application call to the message generator.

However, Frederiksen discloses an application call to a editor application that allows user to enter inputs ([0120], [0113], calendar application calls on an editor application to enter inputs)

It would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Ben-Shachar/Lewis/Frederiksen to perform application call from the scheduling element to the message generator to allow user to define message content and provide ease of use to the user.

Ben-Shachar/Lewis/Frederiksen does not explicitly disclose the message generator for defining at least one recipient of said message. Although Lewis's system is capable of determining any data field changes in the notification message, the fields including a message recipient ID (col. 10 lines 57-63, recipient is identified by a

Art Unit: 2452

message retrieving entity identifier, col. 10 lines 33-43, fig. 6, any data including the message receiving entity is checked for change)

Official Notice is taken that it was known in the art at the time of the invention to define or enter at least one recipient of a message.

It would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Ben-Shachar, Lewis and Frederiksen and what was known to allow the user to further decide which recipients to receive the notification message.

11. For claim 2, Ben-Shachar/Lewis/Frederiksen/ON further discloses said message comprises a notification or an alert comprising a text, an audio track, a visual image, or any combination thereof (Lewis, col. 9 lines 15-17, text alert messages, Ben-Shachar, col. 6 lines 52-61, audible or visual indicia for notification).

12. For claim 3, Ben-Shachar/Lewis/Frederiksen/ON further discloses said message comprises a short messaging service (SMS), a multimedia messaging service (MMS) message, or unstructured supplementary service data (USSD) (Lewis, col. 6 lines 5-23, col. 10 lines 63-66, col. 11 lines 48-65, short message service SMS).

13. For claim 4, Ben-Shachar/Lewis/Frederiksen/ON further discloses said communication network comprises a wireless telecommunication network, a wireless short range short wave radio network, such as Bluetooth, a computer network, or any

Art Unit: 2452

combination thereof (Lewis, abstract, wireless schedule notification method, Ben-Shachar, fig. 3, wireless mobile device).

14. For claim 6, Ben-Shachar/Lewis/Frederiksen/ON further discloses the event scheduling element comprises a calendar element enabling said operator to schedule events (Ben-Shachar, col. 6 lines 52-54), which calendar element connecting to said message generator thereby enabling said operator to define an event in the calendar element and to generate an event notification in said message and to define a predetermined time for transmitting said event notification to said recipient (Ben-Shachar, col. 6 lines 54-61, Lewis, col. 11 lines 16-25, notification prior to a scheduled event at a predetermined time).

15. For claims 15, Ben-Shachar/Lewis/Frederiksen/ON further discloses the recipient comprises one or more mobile communication devices (Lewis, fig. 2, device 34)

16. For claim 16, Ben-Shachar/Lewis/Frederiksen/ON further discloses the recipient is a receiving mobile communication device (Lewis, fig. 2, device 34).

Ben-Shachar/Lewis/Frederiksen/ON does not explicitly disclose the recipient requested to participate in the event.

However, Official notice is taken that it is extremely known in the art that a meeting or conference event participant requests to participate in the event.

It would have been obvious for one skilled in the art to combine Ben-Shachar/Lewis/Frederiksen and ON to allow recipients to request to participate in the event to further provide access control to the event, for example.

17. For claim 17, Official notice is taken that it is extremely known in the art that a host of an event such as a meeting or conference can send a request to invite a participant to participate in the event, before the event time or a notification of a event time.

It would have been obvious for one skilled in the art to combine Ben-Shachar/Lewis/Frederiksen and ON to allow conference host to send requests to invite recipients to join the conference to further provide conference control and access to the conference, for example.

18. For claims 18, further Official notice is taken that it was known in the art that more than one recipient or a plurality of recipients can be defined as recipients of the message.

19. Claims 7-9 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ben-Shachar, in view of Lewis, what was known in the art, and further in view of Chou et al. (US 5,902,352, hereafter Chou).

20. For claim 7, Ben-Shachar discloses an apparatus comprising:

Art Unit: 2452

- a keyboard and display for interfacing with an operator (fig. 3), a storage element storing a message generator application adapted to enable said operator to generate content of a message related to one scheduled event (col. 6 lines 52-61, PIM application at user device allow user to generate an appointment and an associated notification), configured to perform an application call to a transmission application adapted to process and pass the message (col. 6 line 62-col. 7 line 3, call applications to present notification for a user) and a processor for processing data and executing said applications stored in said storage element (fig. 4, processor)

Ben-Shachar does not explicitly disclose a timing application configured to record a predetermined time in a timing register, the message generator application for causing transmission of said message to occur according to the predetermined transmission time.

However, Lewis discloses a timing application configured to record a predetermined time in a timing register (col. 11 lines 8-25, storing the user defined time in memory), the message generator application for causing transmission of said message to occur according to the predetermined transmission time (abstract, col. 8 lines 35-39, col. 11 lines 8-24, transfer a message to a device according to a predetermined time).

It would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Ben-Shachar/Lewis to allow the user to edit or modify alert messages to provide a scheduling program with more usage to the user.

Ben-Shachar/Lewis does not explicitly disclose the timing application being adapted to notify the message generator application;

However, Chou discloses a timer used to notify that a scheduled event (such as sending a message) is to occur (abstract)

Therefore, it would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Ben-Shachar, Lewis, and Chou to implement a notification method that allows the user to edit or modify alert message to provide more functionality and user friendliness to the user and also provide automatic function call between functions such as timing and message transmission.

21. For claim 8, Ben-Shachar/Lewis/Chou further discloses said message generator application is adapted to call said transmission application for preparing transmission through said message handling element, which during the process is adapted to call the timing application starting a timing function determining the transmission time of said message (Lewis, col. 11, lines 8-24, transmission of a notification message is scheduled by placing a period of time prior to the scheduled event, or calling a timing function to time for a transmission of the notification message, a message handling element is just a program code that enters the time from the user's input to the timing function).

22. For claim 9, Ben-Shachar/Lewis/Chou further discloses comprising a calendar application adapted to enable the operator to perform calendar operations (Ben-Shachar, col. 6 line 52, Lewis, col. 10 lines 5-7) and wherein said calendar application is

Art Unit: 2452

adapted to call said message generator application for generating a notification to be transmitted in said message at the predetermined time (Lewis, col. 9 lines 15-17, editing an alert message or a notification, col. 11, lines 8-24, transmission of a notification message is scheduled by placing a period of time prior to the scheduled event, or calling a timing function to time for a transmission of the notification message).

23. For claim 14, Ben-Shachar/Lewis/Chou further discloses the apparatus comprises a mobile communication device for connecting to a communication network (Lewis, fig. 2, cell phone, Ben-Shachar, fig. 1, mobile devices).

24. Claims 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lewis, in view of what was known in the art, and Ben-Shachar and Chou.

25. For claim 10, Lewis discloses a method comprising:

(a) storing in a storage element a message generator application (col. 9 lines 14-18, user can edit the alert message by, e.g., using a known text editor, see Frederiksen, [0120]), a transmission application (col. 11 lines 16-24, delivering or transferring notifications to a remote user's device), and a timing application (col. 9 line 57-col. 10 line 2),

(b) processing data and executing said applications stored in said storage element by means of a processor (col. 7 lines 56-58),

(c) enabling said operator to generate content of a message related to a scheduled event by means of said message generator application interfacing with said operator

Art Unit: 2452

through a display and keyboard (col. 9 lines 9-17, schedule data alert messages associated with an event can be edited by a user (first message), col. 10 lines 57-63, recipient is identified by a message retrieving entity identifier, col. 7 lines 58-62, user enters or schedules an event (second message))

(d) enabling said operator to define a predetermined time for transmitting said message to at least one recipient, the timing application for recording the predetermined time in a timing register (col. 10 lines 55-64, define recipient, time to be delivered, col. 11 lines 8-25, storing the user defined time in memory),

(e) forwarding the message from the message generator application to the transmission application for processing and passing said message by means of said transmission application (col. 11 lines 16-24, transferring notifications to a remote user's device),

(f) timing transmission of said message according to said predetermined transmission time by means of said timing application (col. 11 lines 16-24, timing the scheduled event);

(g) transmitting said message from a device through a communication network at said predetermined time by means of a message handling element operable by said transmission application (col. 8 lines 35-39, send notification in advance of schedule event)

Lewis does not explicitly disclose said operator to define at least one recipient of said message.

However, Official Notice is taken that it was known in the art at the time of the invention to define or enter at least one recipient of a message.

Therefore, it would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Lewis and what was known to allow the user to further decide which recipients to receive the notification message.

Lewis/ON does not explicitly disclose communication between the message generator application and the timing application is by application call, and the transmitting device is a mobile communication device.

However, Ben-Shachar discloses application calls (col. 6 line 62-col. 7 line 4, col. 8 lines 38-42, API calls) and a mobile communication device for scheduling (fig. 1, mobile device 3 in communication with desktop computers 4 and 13, and mobile device 10)

It would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Lewis/ON and Ben-Shachar to perform application call from the scheduling element to the message generator to provide ease of use to the user.

Lewis/ON/Ben-Shachar does not disclose where the timing application continuously checks the predetermined time against an internal clock and generates a notification to the message generator application for initiating the transmission of the message.

However, Chou discloses setting a timer which indicates the time which should elapse until a scheduled event (such as sending a message) is to be activated (abstract)

Therefore, it would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Lewis, ON, Ben-Shachar and Chou to implement

Art Unit: 2452

a notification method on a mobile device that allows the user to edit or modify alert message and to implement the use of a timer to activate an event as disclosed by Chou.

26. Claim 11 is rejected for the same rationale as in claim 10.

27. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ben-Shachar/Lewis/Frederiksen/ON, as applied to claim 1, further in view of Chou.

28. For claim 12, Ben-Shachar/Lewis/Frederiksen/ON does not disclose the message generator is configured to send a counting start request to the timing element wherein the predetermined time is registered in the timing register in response to the counting start request.

However, Chou discloses setting a timer (fig. 8 step 810 and 815) which indicates the time which should elapse until a scheduled event (such as sending a message) is to be activated (abstract)

Therefore, it would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Ben-Shachar, Lewis, Frederiksen, what was known and Chou to implement a notification method on a mobile device that allows the user to edit or modify alert message to provide more functionality and user friendliness to the user.

29. For claim 13, Ben-Shachar/Lewis/Frederiksen/ON/Chou further discloses the timing element is configured to continually check the predetermined time with an internal clock function and send a counting done signal to the message generator when

Art Unit: 2452

the predetermined time is reached to initiate the sending of the message (Chou, abstract, when timer expires, task is activated, fig. 8 step 835).

30. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ben-Shachar/Lewis/Frederiksen/ON, as applied to claim 4, further in view of Kawamoto et al. (US 7,194,558, hereafter Kawamoto)

31. For claim 5, Ben-Shachar/Lewis/Frederiksen/ON does not disclose said communication network further comprises a television network connecting to a gateway connected to said telecommunication network, said computer network, or said Bluetooth network.

However, Kawamoto discloses said communication network further comprises a television network connecting to a gateway connected to said telecommunication network, said computer network, or said Bluetooth network (fig. 1, col. 6 lines 1-8, a home gateway is connected between a public communication network including a telephone line, a cable television, and ISDN, the mobile device can be connected to a telephone line using a wireless phone, or a PDA wirelessly connected through the Internet using a Bluetooth connection, which is well known in the art).

Therefore, it would have been obvious for one skilled in the art at the time of the invention to combine the teachings of Ben-Shachar/Lewis/Frederiksen/ON and Kawamoto to implement a gateway having advanced functionality by adding functions of routing information providing processing to a gateway in a network configuration, such

Art Unit: 2452

as an Ethernet, including a TV, phones, and PCs to reduce the cost of building separate transmission lines (Kawamoto, col. 1 line 64-col. 2 line 5).

Conclusion

32. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure is included in form PTO 892.

33. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hieu T. Hoang whose telephone number is 571-270-1253. The examiner can normally be reached on Monday-Thursday, 8 a.m.-5 p.m., EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee can be reached on 571-272-3964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
